ENGINEERING

Your Precision Engineering Specialist

Engineering Services:

From quotation through to the complete manufacturing cycle all the way to delivering quality components and products. Our manufacturing capability ranges from basic to advanced automated high-speed CNC machining and turning solutions. Our machines are programmed by highly skilled and trained personnel, either manually or by using CAD/CAM software.

Complex fabrication to drawing is also catered for with the capability of machining various metals such as aluminum, titanium, stainless steels and various polymers.

Our engineering services include: CNC turning, CNC milling, drilling, tapping, chamfering, splining, slotting, sawing, polishing, boring, threading, profile milling, 4th axis milling, pressing bearings, and assembly of components, another specialty of ours is roller engineering.

Rollers

S-2 designs make it a fully sealed roller targeting the needs of the Cement Truck Industry. This being a very specialised and specific industry, Aumic Engineering has over time produced some of the most renowned Cement truck rollers the industry has seen. This puts us at the forefront for all your roller needs. Coupled with our versatile workshop, unique designs and experienced staff, this makes our roller manufacturing services one of the industry leaders. Our S-2 design was specifically designed to be fully sealed, with is exactly what the Cement truck industry needed.

Aumic Engineering offers a full turnkey solution!!!
